GUIOMER, D. (1989). *Piper Alpha Public Inquiry. Transcript, Day 70*

GUIRAIO, C.M. and BACH, G.G. (1979). On the scaling of blast waves form fuel–air explosives. *Proc. Sixth Symp. on Blast Simulation*

GUIRAO, C.M., BACH, G.G. and LEE, J.H. (1976). Pressure waves generated by spherical flames. *Combust. Flame*, **27**, 341

GUIRAO, C.M., KNYSTAUTAS, R., LEE, J.H., BENEDICK, W. and BERMAN, M. (1982). Hydrogen–air detonations. *Combustion*, **19**, 583

GUISE, A.B. (1967). Extinguishment of natural gas pressure fires. *Fire Technol.*, **3**(Aug.), 175

GUISE, A.B. (1975). How to fight natural gas fires. *Hydrocarbon Process.*, **54**(8), 76

GUISE, A.B. (1976). How to fight natural gas fires. *Fire Int.*, **53**, 41

GUISE, A.B. and ZERATSKY, E.D. (1965). Fire extinguishing agents and their application. In Fawcett, H.H. and Wood, W.S. (1965), *op. cit.*, p. 485

GUISE, A.B. and ZERATSKY, E.D. (1982). Fire extinguishing agents and their application. In Fawcett, H.H. and Wood, W.S. (1982), *op. cit.*, p. 357

GULBRANDSEN, T. (1991). Expanding the applicability of risk assessments by using expert system technology. *First ESReDA Seminar on The Use of Expert Systems in Safety Assessment and Management*, London

GULDEMOND, C.P. (1986). The behaviour of denser than air ammonia in the presence of obstacles – wind tunnel experiments. *Ammonia Plant Safety*, **26**, 140. See also *Plant/Operations Prog.*, **1986**, 5, 93

GÜLDER, O.L. (1982). Laminar burning velocities of methanol, ethanol and isooctane-air mixtures. *Combustion*, **19**, p. 275

GÜLDER, O.L. (1989). Influence of hydrocarbon fuel structural constitution and flame temperature on soot formation in laminar diffusion flames. *Combust. Flame*, **78**, 179

GULF PUBLISHING CO. (1977). *Map of Oil and Gas Wells/ Fields and Pipelines Offshore Texas and Louisiana* (Houston, TX)

GÜLICH, J.F. and RÖSCH, A. (1989). Cavitation erosion in centrifugal pumps. *Chem. Engng Prog.*, **85**(11), 68

GULYA, J.A. and MARSHALL, E.G. (1970). New property data for hydrocracker steels. *Hydrocarbon Process.*, **49**(6), 91

GUMBEL, E.J. (1942). On the frequency distribution of extreme values in meteorological data. *Bull. Am. Met. Soc.*, **23**, 95

GUMBEL, E.J. (1958). *Statistics of Extremes* (New York: Univ. of Columbia Press)

GUMLEY, J.R., INVERNIZZO, C.G. and KHALED, M. (1977). Lightning protection – a proven system. *Fire Technol.*, **13**, 114

GUMM, W.G. and TURNER, J.E. (1976). The non-destructive testing spectrum. *Chem. Engng*, **83**(Aug. 16), 65

GUNDERLOY, F.C. and STONE, W.L. (ca. 1980). *Planning Guide and Checklist for Hazardous Materials Contingency Planning. Report*. Fed. Emergency Mngmt Agency, Washington, DC

GUNDERSEN, T. and NAESS, L. (1988). The synthesis of cost optimal heat exchanger networks. *Comput. Chem. Engng*, **12**, 503

GUNDZIK, R.M. (1983). Standardized pilot plant procedures. *Chem. Engng Prog.*, **79**(8), 29

GUNN, A.S. and VESILIND, A. (1986). *Environmental Ethics for Engineers* (Chelsea, MI: Lewis)

GUNN, D.C. and HORTON, R. (1989). *Industrial Boilers* (London: Longmans)

GUNN, D.J. (1970). The optimized layout of a chemical plant by digital computer. *Computer Aided Design*, **2**(3), 111

GUNN, D.J. (1982). Spreading and dispersion of dense vapours and gases. *The Assessment of Major Hazards* (Rugby: Instn Chem. Engrs), p. 57

GUNN, D.J. (1984). Dispersion and containment of dense vapours. *The Protection of Exothermic Reactors and Pressurised Storage Vessels* (Rugby: Instn Chem. Engrs), p. 67

GUNN, J.A. (1920). The action of chlorine, etc., on the bronchi. *J. Med.*, **13**, 121

GUNNING, A. (1987). Nuclear fatalities. *Chem. Engr, Lond.*, **435**, 4

GUNTHER, R. (1969). Transfer processes in flames. *Chem. Ing. Tech.*, **41**(5–6), 315

GUOXIANG L.I. and WANG CHANGYING (1981). Comprehensive study of electric spark sensitivity of ignitable gases and explosive powders. *J. Electrostatics*, **11**, 319

GUPTA, A.K. (1949). The explosive polycondensation of ethylene oxide. *J. Soc. Chem. Ind.*, **68**(Jun.), 179

GUPTA, B.P. and JEFFREY, M.F. (1979). Optimize centrifugal compressor performance. *Hydrocarbon Process.*, **58**(6), 88

GUPTA, J.P. (1986). *Fundamentals of Heat Exchanger and Pressure Vessel Technology* (Washington, DC: Hemisphere)

GUPTA, J.P. (1999). Inherently safer design in chemistry and chemical engineering education. *Green Chemistry Network Newsletter*, **2** (July), 9–10

GUPTA, J.P. (2000). A course on inherently safer design. *J. of Loss Prev. in the Process Ind.* **13**, 63–66

Loss Prevention Bulletin

(Institution of Chemical Engineers)

LOSS PREVENTION BULLETIN (Institution of Chemical Engineers)

Sample issue 1975 – Reactor thermal stability, p. 2; Storage tank collapse, p. 2; Explosion and fire in ethylene plant, p. 3; How strong is your storage tank?, p. 3; Hammerblow in pipelines, p. 6
1 1975 – Are your plant modifications safe?, p. 1; More cases of water hammer, p. 7; Exothermic reactor, p. 10; Air eliminator explosion, p. 15
2 1975 – Static electricity as a fire hazard, p. 1; Investigation of electrostatic ignition hazards, p. 12; How can we tell if the accident record is really better?, p. 15
3 1975 – Explosive reactions caused by impurities, p. 1; Practising what is preached, p. 8; Hydrogen sulphide, H_2S, p. 17
4 1975 – Total loss control, p. 1; Engineering maintenance, p. 9
5 1975 – Chemical and physical explosions in furnaces and boilers, p. 1; Bellows again (see also LPB 6), p. 9; Reaction kinetics, p. 16
6 1975 – Hazards of corrosion, p. 1; Relief valves and bursting discs, p. 12; More explosions in plant equipment (see also LPB 7), p. 17
7 1976 – Instrumentation and control, p. 11; Nitrogen, p. 11; Human error, p. 15
8 1976 – Second chance and fail safe design, p. 1; Explosions and fire involving dusts, p. 7; Information for plant operators, p. 19
9 1976 – Vessel overflows, p. 1; Mishap miscellany, p. 5; Potential hazards due to seal failures, p. 12; Unexpected material properties, p. 26
10 1976 – Fin fan coolers, p. 1; Ball valves, p. 3; Radios (see also LPB 11), p. 4; Pressure relief valve chattering, p. 5; The spreading and dispersion of a large release of heavy gases, p. 9
11 1976 – A major incident, p. 2; The risk of hydrocarbons entering steam and condensate systems, p. 5; Mishap miscellany, p. 10; Control room design and location – one company's viewpoint (see also LPB 13), p. 16; Reliability assessment Pt 1, p. 18
12 1976 – Hazards of pyrophoric iron sulphide, p. 1; Safe design and operation of hot oil tanks, p. 7; Neutralisation of phosphorous trichloride, p. 11; Inadequate physical and chemical data – source of major hazard, p. 12; Reliability assessment Pt 2, p. 17
13 1977 – Chemical reactor hazards, p. 2; Hose and coupling incidents, p. 5; Laboratory accidents, p. 14; Coaxial pipes, p. 17; Phosphorus chlorides, p. 21
14 1977 – Operating, maintenance and modification procedures (software), p. 2; Excess flow valves – one company's view, p. 15; Diagnostic techniques, p. 17
15 1977 – Hydrogen (see also LPB 18), p. 2; Building ventilation, p. 10; Liquid metal embrittlement (see also LPB 17), p. 23; Safety systems for tanker loading and unloading, p. 30; Road tanker hose and coupling incidents, p. 33; Hose and coupling incidents, p. 35
16 1977 – The hazards of mineral acid and alkali handling (see also LPB 16), p. 3; Protection for bulk storage of corrosive liquids, p. 21; Control room design and location – a further viewpoint, p. 24
17 1977 – Lagging fires (see also LPB 19), p. 2; Relief valve and venting systems – more hazards associated with maintenance and modification, p. 15
18 1977 – Plant commissioning hazards (see also LPB 19, 20), p. 2; Laboratory accidents, p. 17; Co-axial pipes, p. 2; Excess flow valve incident, p. 22
19 1978 – The transport of chemicals by road, p. 1; Safety down the drain, p. 10; Compression ignition – a case history, p. 24
20 1978 – More software failures, p. 41; Hazards of gas cylinders, p. 45; A new approach to the layout of storage tanks, p. 55
21 1978 – Instrumentation, p. 68; Sparks from steam, p. 81; Hydrogen, p. 85
22 1978 – Hazards of improvisation, p. 101; Fire extinguishing agents and their uses, p. 107; Reflections on the rubbish bin, p. 114; A new approach to the layout of storage tanks (letter), p. 114
23 1978 – Loss prevention in the design and selection of bursting discs, p. 125; Material selection – a factor for loss prevention, p. 136; Hazards of radio frequency ignition, p. 147
24 1978 – Engineering maintenance, p. 155; Liquid lightness of tank dikes, p. 164; Ancillary equipment incidents, p. 167; Corrosion/erosion – some more accidents, p. 172
25 1979 – Fire and explosion hazards in dryers by D. Reay; Loss prevention: a one company view by D.J. Kerr; Reactive chemicals: cyanuric chloride, p. 19; Dimethyl sulphate (letter), p. 24
26 1979 – Bulk storage of corrosive liquids – catastrophic failure of phosphoric acid tanks (see also LPB 33), p. 31; Pressure testing, p. 39; Hazards of comminution, p. 48; Explosions in seal oil reservoirs of centrifugal gas compressors, p. 51; Liquid tightness of tank dikes (letter), p. 52
27 1979 – Acoustic emission testing, p. 59; Hazards involving the use and storage of drums, p. 68; Report on the International Symposium on Grain Elevator Explosions, p. 76; Engineering maintenance – further incidents, p. 80; Academic use of Hazard Workshop Modules by G.S.G. Beveridge
28 1979 – Thermal properties of reactors and some instabilities, p. 91; Flare systems, p. 97; Stress corrosion cracking of stainless steel, p. 104; Design recommendations for outdoor drum storage, p. 115, Guide Notes on the Safe Use of Stainless Steel in Chemical Process Plant (letter), p. 118
29 1979 – Some hazards due to layering of liquids, p. 124; Static electricity – further case histories, p. 134; Dead head hazards of centrifugal pumps, p. 139; Embrittlement of stainless steel by zinc, p. 149; A'nitrogen explosion' (letter), p. 151
30 1979 – Fire in ducting, p. 155; Thermal decomposition tests, p. 159; Aniline toxicology, p. 165; 'Small is beautiful', p. 171; Embrittlement of stainless steel by zinc, p. 175
31 1980 – The Second Report of the Advisory Committee on Major Hazards – a review by G.S.G. Beveridge; Fire resistance and flame retardants, p. 5; Oxygen deficiency in nitrogen atmospheres and related problems, p. 11; Valve limitations, p. 17; Flare systems – pump out of knockout drum (letter), p. 27
32 1980 – Atmospheric storage tanks for flammable liquids, p. 1; Shell/bottom junction failure in a cone roof tank, p. 13; HSE Guides: tanker marking – packaging and labelling – hot work, p. 15; Legal obligations in relation to chemical engineering laboratories by V.C. Marshall; Hazards in chemical engineering laboratories by D.H. Napier; People in laboratories by MA Buttolph; Designing of chemical engineering laboratories by

K. Everett; Planning safe chemical engineering experiments by H.W. Fowler; A case study: designing new chemical engineering laboratories by G.F. Martin

33 1980 – An accident investigation procedure by P. Robinson (see also LPB 34); Industrial dermatitis by R.J.G. Rycroft; A case of valve failure by P.R. Perkins

34 1980 – One company's approach to the authorisation of modifications, p. 1; Some seldom considered aspects of pressure relief systems by D.S. Scott (see also LPB 36)

35 1980 – Static electricity and dust explosions, p. 1; Hazards of plant cleaning, p. 7; The Law on safety – some questions answered, p. 13; Hazards from ionizing radiation by B. Holiday

36 1980 – To vent or not to vent, p. 1; Operating experiences with incinerators from a loss prevention standpoint by D.R. Ready and R.F. Schwab; Another Feyzin (see also LPB 40, 41), p. 25

37 1981 – Safety of atmospheric storage tanks, p. 1; How strong is a storage tank?, p. 7; Failure of a lime silo (see also LPB 39), p. 23; From batswing burner to wind tunnel or 'Is the fume cupboard obsolete' – one man's view by V.C. Marshall

38 1981 – Accidental release of ammonia to the atmosphere – evidence for the occurrence of denser-than-air vapours by G.D. Kaiser; Hazards of unsatisfactory plant cleaning, p. 23; BSI quality assurance scheme for industrial fasteners, p. 23

39 1981 – Electrical fire dangers in the chemical industry by G. Marshall; Glove boxes – some aspects of their use, p. 11; Distribution safety (see also LPB 43), p. 17

40 1981 – Hazard identification game by D. Lihou; Power fluidics – control without movement, p. 7

41 1981 – Guidance note on the leak hazards of glass process plant and pipeline equipment, p. 1; Fire hazards of electric cables in trays, p. 5; Rupture of roof of caustic storage tank, p. 11; Flame arresters and explosion suppression, p. 13

42 1981 – Safe transport of radioactive materials by P.W. Wilson; Glass as a construction material in the chemical industry, p. 11; Safety in design of plants handling liquefied light hydrocarbons (see also LPB 45), p. 21; An overview of disaster control by D. Lihou

43 1982 – Fire prevention/protection – a company's approach to fire safety (see also LPB 44), p. 1; Case history of a liquid propane release at Norsk Hydro's ethylene plant at Rafnes, Norway, 8th July, 1981 (see also LPB 47), p. 21; Case histories related to fire, p. 21

44 1982 – Design and maintenance of trip systems by M.R. Gibson and G. Knowles; Mississauga by R.F. Fordham; Mexican rail incident 1st August 1981, p. 33; More on glassware – incidents and practical hints, p. 35

45 1982 – Rollover of metal reverse bursting discs: a problem, p. 1; Manufacturer's comments (on bursting discs), p. 77; Elfab Hughes (J.D. Falconer), BS&B Safety Systems (H.J.R. Beveridge) (see also LPB 46), Johnson Mathey Metals Ltd (G.C. Brazier), Crosby Valve and Engineering Ltd (G.R. Newman) and An abbreviated report on a test of damaged discs by J.D. Falconer

46 1982 – Hazard and risk analysis – a foreword by V.C. Marshall; Completeness and discrimination of hazard analyses by J.R. Taylor (see also LPB 48); Hazop – the views of the Chemical Industries Association by P.C. Merriman

47 1982 – The probability of coincidence by J.D. Edwards; Fire at Browns Ferry Nuclear Power Station, p. 13; Spontaneous combustion, p. 15; Fighting rim fires by T.A. Kletz; Hazard to pressure vessels storing large quantities of a hazardous material, p. 26

48 1982 – The hazops man comes to call – two case studies of hazard studies for relief systems by D.S. Scott (see also LPB 49); HF acid leak in alkylation unit, p. 13; Accidents of the past by T.A. Kletz; Flixborough – the role of the emergency services by V.C. Marshall; Accidents today, p. 27

49 1983 – One company's experience of a hazop study (see also LPB 51), p. 1; Safety lockout and electrical isolation, p. 7; Accidents of the past by T.A. Kletz; Ventilation, p. 15; Accidents of today, p. 26; How far will heat flow down a dead pipeline?, p. 28; MUF (Material Unaccounted For), p. 28

50 1983 – A risky life by Sir F. Warner; Chemical hazards – reminiscences and lessons of fifty five years by S.R. Tailby, Some historical notes on explosions by J. Bond; Health hazards of yesteryear by J.T. Carter

51 1983 – Inherently safer plant – the concept, its scope and benefits by T.A. Kletz; Unusual dust explosion, p. 9; Fire and explosion case histories (see also LPB 53), p. 13; Computer aided operability study by D.A. Lihou (see also LPB 53); Major hazards work in the HSE – a personal view by R.P. Pape

52 1983 – Conflagration at Cleveland, Ohio, 20th October 1944 by V.C. Marshall; The runaway train, Montanas, Mexico, p. 7; Exxon Chemical's method for identifying potential process hazards by C.H. Solomon; Lessons from the past 3 – one of Britain's worst oil fires by T.A. Kletz; Case history – static discharge from plastic surfaces, p. 19; Methodologies for hazard analysis and risk assessment in the petroleum refining and storage industry (review) by B.W. Eddershaw; The Safety and Reliability Directorate by J. Clifton

53 1983 – Hazard studies and hazard analysis 10 years on by J. Illidge; Inherent safety of pressure vessels and systems by K.M. Wicks; Confined space entry, p. 15; Seveso: cause; prevention (see also LPB 54), p. 27

54 1984 – Have you identified all the hazards of your job? by C.H. Solomon, Propane vapour escape from a rail tank car (see also LPB 56), p. 7; Fire and explosion in a gas oil separation plant, p. 13; Incidents 1981, p. 21; Second International Conference on. Cryogenic Concrete – a review by J.N. Edmondson; Conference on the Safe Handling of Flammable Dusts – a review by K.N. Palmer

55 1984 – On-stream sealing of leaking flange joints using a compound sealing process by H.K. Maushagen; One company's experience of permit-to-work systems, p. 11; Dealing with the toxic hazards of disposal in a safe manner by J.D. Cook; Summary of the Mond Fire, Explosion and Toxicity Index by P. Doran and T.R. Greig; Observation of the effects of zinc-rich paint on 7 and 9 Cr–Mo steels during stress relieving and the development of suitable cleaning procedures by SETE Consultants and Services Ltd

56 1984 – Corrosion beneath thermal insulation – a cause for concern, p. 1; Accidents of the Past No. 4 – carbon dioxide as a cause of explosions by T.A. Kletz; Spread of fire, p. 11; Formic acid – a hidden hazard, p. 24; Dow reports an accident involving a fatality, p. 26; Accidents of today – plastic plugs in pressure containing equipment, p. 26

57 1984 – A major fire in a floating roof crude oil storage tank by C.J. Mumford (see also LPB 63); Report on the incident at the Texaco Company's Newark storages facility, 7th January 1983, p. 11; Case histories – tank fires, p. 19; C.A. La Electricidad de Caracas, December 19, 1982, Fire

(near) Caracas, Venezuela by W.M. Garrison (see also LPB 59, 60, 61)

58 1984 – One hundred largest losses – a thirty year review of property damage losses in the hydrocarbon-chemical industries by F.A. Manuele; Storage of liquid ammonia (see also LPB 59), p. 13; Accidents of the past No.5 – major fire at a marketing terminal by T.A. Kletz; The HSE heavy gas dispersion trials project at Thorney Island by B. Roebuck; The Human Factors in Reliability group by I.A. Watson

59 1984 – Intelligent fire detection systems by M. Finucane; Rapid ranking of hazards by C.J. Mumford and D.A. Lihou; Safe disposal of relief discharges by M. Kneale; Entry into a confined space – a retrospective look by J. Bond; Pressure reducers, p. 28; Lessons from the past No. 6 – reluctance to recognise new hazards by T.A. Kletz; Nitrogen – a gassing incident and a near miss, p. 30

60 1984 – Incidents 1982, p. 1; odour as an aid to chemical safety: odour thresholds compared with threshold limit values by P.J. Lynskey (see also LPB 61); Personal protection: respiratory protection – the importance of facepiece fit by M.J. Evans and P. Leinster; Weak spots in a refinery, p. 40

61 1985 – Emergency procedures by P.J. Lynskey; Update on the Spanish campsite disaster by L. Hymes; The phosphorus railcar explosion near Brownson, Nebraska, on Sunday, 4 February 1978 by I. Hymes; Major disaster averted in massive escape of vinyl chloride by J. Kilmartin (see also LPB 65); Accidents of today, p. 33

62 1985 – Toxic gas incidents – some important considerations for emergency planning by G. Purdy and P.C. Davies (see also LPB 63); Interactive video, p. 13; A matter of some agitation by M. Kneale; Safety aspects of the use of microcomputers and programmable controllers for chemical process control by S.J. Skinner Guide to reducing human error in process operation by P.W. Ball; A compressor overspeed, p. 27

63 1985 – Bhopal – the company's report, p. 1; The toxic hazards of hydrogen sulphide by P.J. Lynskey; Some H_2S incidents by HSE; The hazards of nitrogen by J. Bond, Improving process safety and loss control software in existing process plant by H.M. Tweedale; Preparation for entry into a confined space – one company's view (see also LPB 64), p. 31

64 1985 – Analysis of the LPG disaster at Mexico City by C.M. Pietersen; Refinery fire contained, p. 13; The toxic effects of chlorine by MHAP; Accidents of today, p. 27

65 1985 – Loss prevention implications of arson: Pt 1, Case histories and prevention by P.A. Carson, C.J. Mumford and R.B. Ward; Acetylene cylinder fire, p. 15; Violent polymerisation by J. Bond; An ethylene reflux pump fire by J. Bond, Spectators and other vulnerable exposes to major accident hazards: an emergency services headache by I. Hymes

66 1985 – Dust explosibility testing by P. Field (see also LPB 66); Some recent British initiatives on dust explosions prevention and protection by G. Butters; Principles for the safe transfer of technology by EFCE; Hydrogen cyanide release from a failed bonnet gasket, p. 23; The need to be blamed (letter) by D.A. Lihou (see also LPB 67)

66 suppl 1985 – Incidents 1983

67 1986 – Industrial health hazards: Pt 1, Sources of exposure to substances hazardous to health by P.A. Carson and C.J. Mumford; Lessons from the past No.7 – flying saucers have landed by T.A. Kletz; Ludwigshafen – two case histories by V.C. Marshall

68 1986 – Unconfined vapour cloud explosions involving hydrogen rich gases – estimating the blast effects by J.L. Hawksley; The Spanish campsite disaster – a new scenario by H. Ens; Reactor incident, p. 33; Experience with a temperature monitoring system, p. 35; The effects of explosions in the process industries by the MHAP

69 1986 – Some problems with valves by J. Bond; Leak sealing using compound injection by J. Bond; Refinery fire, p. 17; Fatal accident on a hydrocarbon recovery plant, p. 25; The rupture of a tank of benzene, p. 29; Power station fire, p. 33

70 1986 – Handling the vapour cloud after failure of a flare line, p. 1; Polymer lined GRP tank failure, p. 7; Loss prevention implications of arson Pt 2 – Investigation by P.A. Carson and C.J. Mumford; Flashing liquid flow calculations by D.A. Carter

71 1986 – One hundred largest losses – a thirty year review of property damage losses in the hydrocarbon-chemical industries by F.A. Manuele; Maintaining your sprinkler system by Factory Mutual Engineering Corporation; Explosion in an oxidised bitumen tank, p. 71; Ship/shore transfer of liquefied gases by J. Bond; Fire in a coker unit, p. 27; Three injured in extruder explosion, p. 31; The Spanish campsite disaster (letter) by J. Foxcroft

72 1986 – Sizing pressure vacuum valves for cone roof tanks, p. 1; The first tanker explosion by P. Watson; Inadvertent pressure-testing of a storage tank to destruction, p. 7; The Spanish campsite disaster – a third view by V.C. Marshall; Comments on 'The Spanish campsite disaster – a third view' by H. Ens; Causes of accidents (the results of a study), p. 21; Some problems with valves – another case history, p. 28

73 1987 – Some essentials of lightning protection (in electrical systems) by Factory Mutual Engineering Corporation; Explosion in an isopropyl alcohol tank, p. 9; Is pipework given the attention it deserves by R.F. Towndrow; A tale of woe by C.D. Plummer; Spanish campsite disaster (letter) by J. Bond (see also LPB 72); Extruder explosion (letter) by L. Carter (see LPB 71)

74 1987 – An oleum leakage, p. 1; Explosion in a superheater, p. 15; Fire protection systems – how to cope with impairments, p. 17; A pump explodes, p. 23

75 1987 – Autoignition temperatures (AITs) – how hot is dangerous? by F.S. Ashmore and D. Blumson; The Sandoz warehouse fire, p. 11; Overpressuring of a storage tank, p. 19; Explosion in a heat exchanger during demolition, p. 22; Hydrogen sulphide incident, p. 23; The two safeguard approach for minimising human failure injuries by J. Bond and J.W. Bryans

76 1987 – Industrial health hazards: Pt 2, Development of UK legislation by P.A. Carson and C.J. Mumford; The Chernobyl accident by A.N. Hall, S.F. Hall and W. Nixon; HSE warning on road tanker discharge valves, p. 30; Failures of glass reinforced plastic tanks by T.E. Maddison

77 1987 – The Feyzin disaster, p. 1; Major LPG fire at US refinery, p. 11; Sabotage causes propane release, p. 17; Fire at LPG recovery installation of a refinery, p. 27

78 1987 – Static electricity hazards in industry by F.J. Pay; Electrostatic ignition of volatile liquid vapour, p. 9; Hydrogen explosion/detonation in an ammonia plant, p. 11; Temporary manhole covers by J. Bond; Three year

survey of accidents and dangerous occurrences in the UK chemical industry by B.J. Robinson; Molten sulphur spillage, p. 23; Heat of dilution causes violent eruption in storage tank, p. 26; Computerised chemical engineering industry information by S. Pantry

79 1988 – Flame arresters and the chemical tanker by P.B. Watson; The velocity flame stopper by W.B. Howard Faulty ducts cause switchroom fires, p. 23; Safety audit of refrigerated gas facilities, p. 25; Static electricity hazards in industry (letter) by P.A. Kalisvaart (see also LPB 78)

80 1988 – Protective clothing design by L.E. Jones; Operator burned whilst using incorrect tanker connection, p. 3; Gloves as protective equipment by I.P. Hoyle; Protection from protective clothing by I.P. Hoyle; Hazards on a rubber injection moulding machine, p. 14; Expect the unexpected, p. 14; Acetylene cylinders can be dangerous by F.S. Ashmore; Shattering rotameter cuts safety glasses in half p. 19; Dizzy heights, p. 20; Some problems with breathing apparatus, p. 21; The International Safety Rating System by J. Bond

81 1988 – Chernobyl – was it the worst accident? by V.C. Marshall; Glasnost now applies to the Soviet chemical industry, p. 15; Incinerator explosion, p. 17; Cool flames by R.D. Coffee; Autoignition, slow combustion and the variation of minimum ignition temperature with vessel size by T.J. Snee; Lessons from the past – entry into vessels, p. 29; Qatar tank failure (letter) by T.A. Kletz

82 1988 – Calculation of the intensity of thermal radiation from large fires by MHAP; ‘Pops’ in tanks, p. 12; Chemical risk: living up to public expectations by H.J. Corbett Tank farm burns for a whole week, p. 19; The Boston, Mass., incident of January 15th, 1919 by V.C. Marshall

83 1988 – Failure of a flexible pipe in an H_2 installation area, p. 1; Seizure of boiler relief valves, p. 3; Failure of articulated bellows by A. Smith; Another non-return valve failure, p. 9; Damaged flange seal face leads to ammonia release, p. 11; Fire on a gasoline treater unit, p. 13; Process worker sustains an acid burn to his right eye, p. 15; Release of UF_6 in a vaporiser room, p. 17; Some incidents caused by failure of screwed joints, p. 19; An explosion involving 1,1,1-trichlorethane by I. Wrightson and R.C. Santon; Three incidents, three lessons, p. 25; Explosion and fire at a phenol plant by R.F. Schwab; ‘Pops’ in tanks (letter) by T.A. Kletz (see also LPB 82)

84 1988 – Protection of warehouses against fire by A. Mackintosh; The forgotten hazards: services in warehouses by R. Heels; Materials selection for composite fire damper by B.D. Baines; Lack of segregation causes rapid spread of fire, p. 19; Fire in Auckland, New Zealand by B.S. Amstrong; Molten sulphur spillage (letter) by P.G. Ayers (see also LPB 78)

85 1989 – HF burn to fitter’s forearm, p. 1; Serious accident during valve replacement caused by incorrect procedure, p. 3; Release of UF_6, vapour, p. 5; If it didn’t quite happen . . . tell somebody, p. 7; A programme of safety assurance of liquid carbon dioxide storage vessels by A.R. Coleman; UK and European hazard information systems – a personal view by B. Cahill; Caustic potash spillage in tank farm, p. 27; Protection of warehouses against fire (letter) by B. Johnston (see LPB 84)

86 1989 – A case history involving the release of chlorine, p. 1; Pressure testing and its hazards by R. Dooner and V. Marshall; Exposure to acetone cyanhydrin, p. 17; A reappraisal of safety in chlorine handling, p. 19; Release of HF fume due to valve fracture, p. 22; Wrongly labelled gasket causes chlorine release, p. 23; Release of chlorine from an expansion pot, p. 27; Protection of warehouses against fire (letter) by K.N. Palmer (see also LPB 85); Nitrous oxide: no laughing matter (letter) by L. Bretherick

87 1989 – Two men gassed by H_2S p. 1; Three injured in extruder explosion, p. 3; Corrosion under insulation causes refinery fire, p. 5; Explosion when refuelling a liquid gas-driven stacker, p. 7; Pressure unrestrained, p. 9; Engineering for health by J.R. Jackson; Inherently safer design, p. 21; Emergency planning – in practice by J.M. Mullins; Incident during distillation of nitrobenzaldehyde, p. 27; Release of chlorine from an expansion pot (letter) by T.A. Kletz; Reporting and analysis of industrial incidents (letter) by D.J. Lewis

88 1989 – Operator burned during sampling operations, p. 1; Programmable electronic systems by B.W. Eddershaw; Warehousing of chemicals, p. 9; Storage tanks – a vendetta, p. 11; Explosion in a dinitrotoluene pipeline, p. 13; Raw glycide collecting tank explodes, p. 17; Lessons of the past, p. 18; Bitumen tank fire, p. 19; Electrostatic hazards from pouring powdered chemicals into vessels from plastic bags by J. Bond; Analysis of a tank fire ‘classic’ by L. Steinbrecher, Decomposition of nitric oxide (letter) by J.L. Currie (see also LPB 86); Explosion of 2-nitro-benzaldehyde (letter) by P.G. Urben (see also LPB 87)

89 1989 – Loss prevention in pilot plants: Pt 1 – The hazards by P.A. Carson and C.J. Mumford; Accident to a scaffolder in a plenum chamber, p. 9; Hydrocracker accident, p. 13; Operator fall from scaffold, p. 18; LPG storage cracking experience by J.E. Cantwell; Stress corrosion cracking results in hydrofluoric acid spill, p. 27; Sizing the relief system for runaway reactions by A.J. Wilday

90 1989 – Pavadena explosion, p. 0; The hazards of purging a line, p. 1, Loss control in pilot plants by P.A. Carson and C.J. Mumford: Pt 2, Control measures; LPG pipeline and Trans-Siberian Railway explosion and fire by D.J. Lewis; Investigation into glacial acetic acid spillage, p. 13; List of major incidents 1987, p. 15; Severe burns resulting in fatality caused by dust explosion during pallet shrink-wrapping, p. 27; Two reactor incidents, p. 29; Failure of a reverse buckling disc, p. 30; Incident during vacuum distillation of nitrobenzaldehyde (letter) by J.L. Cronin

91 1990 – Which foam? by D. Waters; Industrial health hazards Pt 3, Some lessons from experience by P.A. Carson and C.J. Mumford; Incompatible materials causes explosion in waste container, p. 15; Compressor incident causes propylene release, p. 16; Disconnecting is sometimes not enough, p. 17; Multiple accident due to release of CO gas in refinery compressor hall, p. 19; Drum of sodium hydrosulphite fire, p. 22; Relief valves on liquid gas tankers (letter) by J.L. Hawksley; Loss prevention in the 90s (letter) by F.K. Crawley

92 1990 – Safety valves: taking the pressure off productivity and improperly closed valves, p. 1; Fatal accident following a toluene leak from a stuffing box, p. 7; Incident involving an engineering foreman scalded by hot water, p. 9; Contractor began repair to the plant pipework without a permit-to-work p. 10; Report relating to a leak of anhydrous hydrofluoric acid (AHF) vapour, p. 11; Overflow of caustic solution from vent scrubber system to the stock tanks, p. 13; Bursting of a cylinder cover on a compressor releasing a large quantity of ammonia, p. 15; Gas leakage that taught a valuable lesson by M. Huvinen; Caustic

solution splashed into fitter's eye, p. 18; Is it isolated – or is it?, p. 19; Work permit precautions not followed, p. 21; Electric shock from damaged light fitting, p. 22; Three incidents involving inadvertent SO_2 discharges, p. 23; Near miss incident with a tanker, p. 25; Investigation into an incident involving a release of hydrogen fluoride (HF) fume, p. 26; Operator burned with hot ethylene glycol, p. 27; Incinerator explosion, p. 29; What next? by J. Bond

93 1990 – The Pepcon disaster, 4th May 1988, Henderson, Nevada by J. Bond; Near miss, p. 3; Loss control in pilot plants: Pt 3, Data collection and evaluation by J. Bond, P.A. Carson and C.J. Mumford; Wrong trip causes low level trip malfunction, p. 23; A strategy for plant management to prevent loss – 7 ways for managers to cut incidents by up to 44% by N. Dunford; Locked pressure that stayed on and . . . on, p. 32; Reactor sparge weighing approximately 5000 N fell a distance of 1.5 m, p. 33; Boiler explosion that caused three fatalities by J. Bond; Is there anything I've forgotten? p. 35; Quantified risk assessment (letter) by D.W. Smith

94 1990 – A tanker spill incident, p. 1; Five incidents involving road tankers, p. 7; Security of vehicle loads (packaged products), p. 10; Accidents involving road tankers with flammable loads by J. Bond; Morris plant olefins unit, September 12, 1989, p. 16; Nightmare on the interstate: fireball from propane tanker accident ignites buildings; cars, grass, kills nine and injures many by R.M. Adelman and B. Adelman; Lessons to be learned from an oil terminal fire by B. Browing and A.H. Searson; An explosion in a cooling water system by D. Mansfield; Large storage area fire, p. 26; Explosion and fire in Houston, Texas, p. 30

95 1990 – Dust explosion during cleaning operation on polymer hopper – case history, p. 1; Chemical company broke the rules; p. 4; Static electricity and bottom loading, p. 5; Well known hazard highlighted by an accident, p. 6; Prevention and protection for combustible dusts; p. 7; An incident involving an explosion of magnesium dust, p. 13; Five explosions involving people working in direct contact with flammable atmospheres; p. 15; Fire in a polymer powder, p. 19; Nightmare on the interstate (letter) by V.C. Marshall (see also LPB 94); Safety valves (letter) by S.J. Kast (see also LPB 92)

96 1990 – Enforcement aspects of COSHH by I. Wrightson, p. 1; The legacy of Flixborough by E. Crooks, p. 7; Maintenance for loss prevention in process industries by I. Hirata, p. 13; Case studies of some fire accidents in Yugoslavia's oil refineries by M. Perunicic and M. Skotovic, p. 23

97 1991 – Safety considerations in using liquid nitrogen by J.W. Hempseed, Asphyxiation hazards of inert gases (see also LPB 98), p. 5; Dryer package H_2S fatality, p. 7; A near miss when titanium gaskets used in error on chlorine, p. 9; Ethylene oxide-hydrate: a commissioning incident by M. Kneale; Pipe rupture and fire in a vinyl chloride monomer (VCM) plant, p. 12; A human factors approach to the effective design of evacuation systems by B.P. Fitzgerald, M.D. Green, J. Penington and A.J. Smith; Toluene drum filling explosion near miss incident, p. 23; Explosion at the Phillips' Houston chemical complex, Pasadena, 23 October 1989 by J. Bond

98 1991 – Managing for safety, p. 0; Flammable vapour escape from condenser vent, p. 1; Tow away incident, p. 5; Case history of a runaway exothermic reaction, p. 7; Formation of butane hydrate leads to hydrocracker fire, p. 9; Fatal accident involving inaccurate P&IDs, p. 13; Explosion at Cooke's Works, Nobel's Explosives Company Ltd, p. 18; Asphyxiation death of a contract welder, p. 19; Acid burns to face, chest and legs during preparation of plant for maintenance, p. 20; Blackout – losing electrical power in chemical process industries by K.B. Ratcliffe; The Peterborough explosion, p. 24; Chlorine release following pipe failure caused by iron/chlorine fire initiated by stress relieving operation, p. 25

99 1991 – Catastrophic losses: an insurance broker's perspective by D.F. O'Donovan; Introduction to the large property damage losses in the hydrocarbon chemical process industries; p. 1; A thirty year review of large property damage losses in the hydrocarbon chemical process industries by Marsh and McLennan; Large property damage losses by K.N. Palmer and V.C. Marshall

100 1991 – Explosion at the BASF Antwerp ethylene oxide/glycol plant, p. 1; Ethylene oxide plant explosion – 3rd July 1987 BP Chemicals, Antwerp, Belgium by B.E. Mellin, The 1990 Shell explosion by T.A. Kletz; The benefits of flame retardant clothing by D.M. Tooth; Fire resistant protective clothing (Nomex suits) by B.E. Mellin; Major incidents – catalyst or initiator for legislative change by M.F. Pantony; Puebla, Mexico – 19th June 1977 by D. Lewis

101 1991 – Houston rail tanker explosion by J. Bond; Hydrogen cyanide tank explosion by J. Bond; Major hazard aspects of the transport of dangerous substances by R.M. Turner Toluene road tanker accident, p. 13; Bangkok LPG disaster, p. 19: 24th September 1990; Crescent City, Illinois – 21 June 1970 by D. Lewis

102 1991 – Piper Alpha – cost of the lessons by T.C. Redmond; Overpressurisation through chemical reactions evolving gaseous products by P.A. Carson and C.J. Mumford; Fire and explosion in process waste water tank, p. 7; Batteries, p. 21; Safe use and handling of primary batteries; p. 23; Electrical safety, p. 25; Two fatalities caused by lack of oxygen in confined spaces; p. 27; Failure of pipework from a chemical plant reactor system by A.B. Smith; Teaching of safety in British universities (letter) by F.K. Crawley; Letter (on bitumen tank fires), p. 35

103 1992 – European Process Safety Centre, p. 0; Refinery losses – waiting for the big one by J. Di Gesso; Management styles – the effects on loss prevention by D.A. Lihou; The largest explosion in the UK, Fauld, 1944, p. 17; Report of an explosive release of graphite scalings from a drum, p. 19; The control of catastrophic event and the 'Big 10' goals in safety management by F.E. Bird; Fatal accident caused by faults in procedures; p. 24; Another valve accident: one accident leads to another, p. 25; Two incidents involving valve actuators, p. 29; Cumene hydroperoxide (CHP) drum explosion, p. 31

104 1992 – Beware the unexpected by F.K. Crawley; Two short piping case studies by F.K. Crawley; What is more important – the permit to work or the execution of the plan?, p. 5; Fire on a gas processing plant, p. 7; Fire in a refinery, p. 9; Demolition near miss, p. 10; Loss of instrumentation from a lightning strike, p. 11; Safe maintenance access on chemical batch reactor plants, p. 12; Frost leads to ice plug damage and fire, p. 13; The Seveso disaster – an appraisal of its causes and circumstances by V.C. Marshall; Two very serious near misses; p. 27

105 1992 – Waverly, Tennessee, 24 February 1978 by D. Lewis; Hazop reviews of electronic interlock/control systems and electrical distribution systems by F.R. Mitchell; Activated charcoal filter fire, p. 15; Learning from accident experience – are the old lessons really being applied? by

B. Hancock; Chemical warehouse fire in New Zealand, 21 December 1984 by P.G. Kirk; A demonstration of the use of Hazcheck and a systems example by an analysis of a recent refinery line accident by G.L. Wells and C.M.C. Phang; Notes on the Fauld explosion (letter) by V.C. Marshall

106 1992 – Hydrocarbon fires in large storage tanks by K.N. Palmer; Overpressurisation of a refrigerated butane storage tank, p. 5; The Cochin refineries fire, p. 9; Problems with monomer storage, p. 14; Report by the tank collapse tank force: Ashland oil tank collapse by B. Mellin; Explosion involving a compressed air breathing apparatus cylinder, p. 17; Propane release during sampling, p. 19; Coriolis flowmeters by J. Bond

107 1992 – Rollover, p. 1; Ammonia tank failure in Lithuania by B.O. Andersson and J. Lindley; Fluid catalytic cracker regenerator incident, p. 17; Damage to an electrical cable by a contractor whilst excavating for drainage modifications, p. 21; Incident where an electrical cable was damaged during ground excavation, p. 22; Explosions in flare stacks during maintenance (see also LPB 108), p. 23; Four incidents involving valves, p. 27; Major hazard aspects of the transport of dangerous substances, p. 29

108 1992 – Safety versus the environment, p. 0; Fires without external ignition sources – part 1, spontaneous combustion by P.A. Carson and C.J. Mumford; Explosions in fired heaters, p. 17; Guidance on hazop procedures for computer-controlled chemical plant by D.M. Willis; Two incidents involving lead/acid batteries, p. 28; Ammonia tank failure in Lithuania: an alternative explanation (letter) by A.J. Wilday (see also LPB 109)

109 1993 – Explosion in a sulphonation process by K. Bergroth; Runaway cleanout, p. 7; Fires without external ignition sources – part 2, the hazards of pyrophoric substances by P.A. Carson and C.J. Mumford; Incident in a salt bath used for heat treatment of uranium slabs, p. 25

110 1993 – Security of electrical supply systems including standby supplies by J.A. McLean; Spillage of ammonia at a tanker offloading station, p. 7; Two asphyxiation hazards, from maintenance, p. 8; Fires without external ignition sources – part 3, precautions for pyrophoric substances by P.A. Carson and C.J. Mumford (see also LPB 111); Polymerisation runaway reaction, p. 25; Quantifying the fire hazard of oil-soaked insulation (letter) by T.O. Craig

111 1993 – European Process Safety Centre, p. 0; Flare and drain systems – the twin Achilles' heels of process plants? by F.K. Crawley; The zero accident approach at British Steel, Teesside Works by J. Ball and D. Procter; Lessons learned from the failure of a computer system controlling a nylon polymer plant by I. Nimmo, S.R. Nunns and B.W. Eddershaw; An accident caused by reverse flow, p. 25; The wrong valve and its rough treatment cause an explosion, p. 26

112 1993 – STATAS: development of an HSE audit scheme for loss of containment incidents – part 1, a loss of containment model by K.B. Ratcliffe; Practical examples of safety risk assessment in BAPCO by R.K. Goyal; Use of 'Lessons learned' for in depth analysis by J.R. Taylor The challenge of Kozloduy by J.A. Ashurst and G. Davidson; Nitrogen near-miss, p. 20; Cumene hydroperoxide (CHP) drum explosion, p. 21; Chlorine leak during shutdown test; Letter (on Coode Island) by G. Croudace

113 1993 – Dust explosion hazards, p. 0; Safety in the design of chlorine dioxide plant by G. Cowley; Pressure vessel failures – 5 incidents, p. 13; STATAS: part 2, management and organisational factors: a socio-technical model of accident causation by K.B. Ratcliffe; Emulsion polymerisation incident, p. 25; A chlorine fatality, p. 26; Static electricity causes fire in powder handling (see also LPB 114), p. 27

114 1993 – Electrostatic hazards of foam blanketing operations by P. Howells; Hazards involved in the handling and use of dimethyl sulphoxide (DMS) by J. Hall; Sunderland petrol (gasoline) tanker fire by V.C. Marshall; Sparks fly during process transfer, p. 19; Only half the story by T.A. Kletz; STATAS: part 3, constructing an audit scheme by K.B. Ratcliffe; The UK Health and Safety Executive Information Service by R. Lewis

115 1994 – The European Process Safety Centre, p. 0; Explosion in a nitration reaction vessel, p. 1; Major refinery loss, p. 6; Butyl acrylate splash, p. 7; Coal dust explosion, p. 9; Water hammer – and so much more by T.A. Kletz; A review of major incidents and their consequences by E. Crooks

116 1994 – The cost of accidents at work, p. 0; The Allied Colloids fire and its immediate lessons by V.C. Marshall; The Fuji Oil Sodegaura refinery accident by the High Pressure Gas Safety Institute of Japan; Safety vs environment by T.A. Kletz; Hydrogen peroxide deflagration in waste water treatment tank p. 17; Two incidents with sealless pumps, p. 21; Instrument sprays acid on shop wall, p. 22

117 1994 – Flixborough – the beginning of a cultural revolution by V.C. Marshall; Flixborough: 20 years on by R.D. Turney; An accident when fitting a new operating mechanism to a live valve by J. Bond; Acid line breaks – worker burned, p. 17; An accident due to a poor vent system, p. 18; Auditing safety procedures by H.M. Tweeddale; Diamine release from joint failure, p. 24

118 1994 – Safety management of multi-product batch plants – wider lessons from the Allied Colloids fire by V.C. Marshall; Runaway polymerisation leads to release of vinyl acetate, p. 8; Fire caused by specification change by R. Turney; Human error as a cause of accidents by W. Rothweiler, Incident involving static electricity discharge on ethanol road tanker, p. 14; Near-miss – circuit breaker falsely indicates lockout, p. 15; Ground fault circuit interrupter protects mechanic, p. 16; Environmental audit in major accident assessment by R.W.S.M. Kingsbury

119 1994 – The fire at Hickson and Welch by T. Kletz; Explosions in a large spray dryer, p. 5; Chemical burn injury, p. 8; Ethyl acetate – is it a static accumulator? by J. Bond; An accident at a vitrification plant, p. 13; Further commentary on the aftermath of the fire at Allied Colloids – an individual view, p. 15; Poor management of change – two incidents, p. 17; Outline of an integrated approach to solve growing safety and environmental conflicts by A. Debeil and L. Myron

120 1994 – Corporate manslaughter: panacea or panic measure?, p. 2; The principle of multiple causes by J. Bond; Some accidents of 1995 by T. Kletz; Start-up modification causes fatalities in 1859 by R. Turney; Chlorine combustion incident, p. 9; Drumming operations lead to fires, p. 10; European Process Safety Centre by B. Hancock; One approach to hazard control, p. 13; Static discharge (letter) by T.H. Pratt; Which risk definition? (letter) by B.C.W. Hotson

Acronyms

AAE	Additional Accommodation East (Piper Alpha)
AAM	accident anatomy method
AAR	Association of American Railroads
AAW	Additional Accommodation West (Piper Alpha)
ABC	general purpose dry chemical
ABCM	Association of British Chemical Manufacturers
ABI	Association of British Insurers
ABL	atmospheric boundary layer
ABMA	American Boiler Manufacturers Association
ABPI	Association of the British Pharmaceutical Industry
ACA	Advisory Committee on Asbestos
ACDS	Advisory Committee on Dangerous Substances
ACE	Army Corps of Engineers
ACGIH	American Conference of Government Industrial Hygienists
ACH	Acetone cyanohydrinbased route
ACMH	Advisory Committee on Major Hazards
ACOP	Approved Code of Practice
ACR	Average circle radius
ACRS	Advisory Committee on Reactor Safety
ACSNI	Advisory Committee on the Safety of Nuclear Installations
ACTS	Advisory Committee on Toxic Substances
ADI	acceptable daily intake
ADN	European Agreement for the International Transport of Dangerous Goods
ADNR	European Agreement for the International Transport of Dangerous Goods (River Rhine)
ADR	European Agreement concerning the International Carriage of Dangerous Goods by Road
ADT	adiabatic storage test
AE	acoustic emission
AEA	action error analysis
AEC	Atomic Energy Commission
AEL	accessible emission level
AFFF	aqueous film forming foam
AFNOR	Association Francaise de Normalisation
AFPA	Australian Fire Protection Association
AGA	American Gas Association
AGR	advanced gas-cooled reactor
AHM	acutely hazardous material
AHP	analytic hierarchy process
AI	artificial intelligence
AIA	American Insurance Association
AIB	Accident Investigation Branch
AIChE	American Institute of Chemical Engineers
AID	Aeronautical Inspection Directorate
AIHA	American Industrial Hygiene Association
AIR	American Institute for Research
AISI	American Iron and Steel Institute
AIT	autoignition temperature
AL	action level
AIARP	as low as reasonably practicable
Amoco	American Oil Company
AN	acrylonitrile
AN	ammonium nitrate
ANA	ammonium nitrate–ammonia
ANAP	action-not-as-planned
ANC	adaptive noise cancellation
ANL	Argonne National Laboratory
ANN	artificial neural network
ANSI	American National Standards Institute
AOD	argon–oxygen decarburization
APC	air pollution control
APCA	Air Pollution Control Association
APAU	Accident Prevention Advisory Unit
API	American Petroleum Institute
APJ	absolute probability judgement
APS	automatic protective system
AQ	air quality
AQD	Aeronautical Quality Assurance Directorate
AQL	acceptable quality level
AQP	average lot quality protection
AR	alcohol resistant
ARC	accelerating rate calorimetry
ASCE	American Society of Civil Engineers
ASHRAE	American Society of Healing Refrigerating and Air-conditioning Engineers
ASM	Algebraic stress model
ASME	American Society of Mechanical Engineers
ASQC	American Society of Quality Control
ASTM	American Society for Testing and Materials
ATMS	assumption-based truth maintenance system
ATN	augmented transition network
ALIT	Association of University Teachers
AWS	American Welding Society
BA	breathing apparatus
BACT	best available control technology
BAM	Bundesanstalt für Materialprüfung
BASEEFA	British Approvals Service for Electrical Equipment in Flammable Atmospheres
BASF	Badische Anilin und Soda Fabrik
BATNEC	best available technology not entailing excessive cost
BCC	British Cryogenic Council
BCF	bromochlorodifluoromethane
BCGA	British Compressed Gases Association
BCISC	British Chemical Industry Safety Council
BCME	bis(chloromethyl)ether
BCS	Beilby, Cottrell and Swinden (model)
BD	bursting disc
BFR	binomial failure rate
BG	British Gas
BGC	British Gas Corporation
BG/C&W	British Gas/Cremer and Werner (model)
BHEP	basic human error probability
BI	business interruption
BIA	Berufsgenossenschaftlicshes Institut für Arbeitssicherheit
BITC	Bureau International Technique du Chlore
BLEVE	boiling liquid expanding vapour explosion
BLV	biological limit value
BM	Bureau of Mines
BMCS	Bureau of Motor Carrier Safety
BNF	Backus–Naur form
BNFL	British Nuclear Fuels Ltd
BNL	Brookhaven National Laboratory
BNP	back-propagation network
BOCA	Building Official and Code Administration
BOD	biological oxygen demand
BOHS	British Occupational Hygiene Society

BOP	blowout preventer
BOR	boil-off rate
BP	bulk property
BPCS	basic process control system
BPEO	best practical environmental option
BPF	British Plastics Federation
BPM	best practicable means
BR	British Rail
BRE	Building Research Establishment
BRL	Ballistics Research Laboratory
BSC	bench scale calorimeter
BSC	British Safety Council
BSC	British Steel Corporation
BSI	British Standards Institute
BTC	British Transport Commission
BTM	bromotrifluoromethane
BUA	built-up area
BWR	boiling water reactor
CA	Certifying Authority
CAA	Civil Aviation Authority
CAA	Clean Air Act
CAAA	Clean Air Act Amendments
CAD	computer-aided design
CADA	critical action and decision approach
CADE	computer aided design and engineering
CADET	critical action and decision evaluation technique
CAER	Community Awareness and Emergency Response
CAF	compressed asbestos fibre
CAPE	computer aided process engineering
CAPITB	Chemical and Allied Products Industry Training Board
CAWR	Control of Asbestos at Work Regulations 1987
CBI	Central Bureau of Investigation (India)
CBI	Confederation of British Industry
CBL	convective boundary layer
CCA	copper–chrome–arsenate
CCD	cause–consequence diagram
CCF	common cause failure
CCPS	Center for Chemical Process Safety
CCS	centralized control system
CCT	cause–consequence tree
CCW	Chester–Chisnall–Whitham
CD	conceptual dependency
CDE	Chemical Defence Establishment
CDFM	conservative deterministic failure margin
CE	critical examination
CEC	Commission of the European Communities
CEFIC	European Federation of Chemical Engineering
CEGB	Central Electricity Generating Board
CEI	Chemical Exposure Index (Dow)
CELD	cause–effect logic diagram
CEN	Comité de Normalisation Européen
CENELEC	Çomité de Normalisation Européen Électrotechnique
CEP	Chemical Engineering Progress
CEP	Chemical Exposure Index (DOW)
CEQ	Commission on Environmental Quality
CERCLA	Comprehensive Environmental Response, Compensation and liability Act (Superfund)
CF	certainty factor
CF	credit factor (Dow)
CFC	Chlorofluorocarbons
CFC	chlorofluorohydrocarbon
CFD	computational fluid dynamics
CGA	Compressed Gas Association
CHA	concept hazard analysis
chazop	computer HAZOP
CHEMSAFE	Chemical Industry Scheme for Assistance in Freight Emergencies
CHEMTREC	Chemical Transportation Emergency Centre
CHEP	conditional human error probability
CHETAH	chemical thermodynamics and energy hazard
CHIP	Chemicals (Hazard Information and Packaging) Regulations 1993
CHL	classification of hazardous locations
CHP	cumene hydroperoxide
CI	Chlorine Institute
CIA	Chemical Industries Association
CIB	Consell Intenrationale de Batiment
CIBS	Chartered Institute of Building Services
CIBSE	Chartered Institute of Building Services Engineers
CIIT	Chemical Industry Institute of Toxicology
CIM	computer integrated manufacturing
CIM	Uniform Rules concerning the Contract for International Carriage of Goods by Rail
CIMAH	Control of Industrial Major Accident Hazards Regulations 1984
CIP	cleaning in place
CISHC	Chemical Industry Safety and Health Council
CJ	Chapman–Jouguet
CLAW	Control of Lead at Work Regulations 1980
CLER	Classification and Labelling of Explosives Regulations 1983
CM	chemical manufacturing
CM	condition monitoring
CMA	Chemical Manufacturers Association
CME	chloromethyl ether
CMF	common mode failure
CMI	Christian Michelsen Institute
COD	chemical oxygen demand
COD	crack opening displacement
COER	Control of Explosives Regulations 1991
CONCAWE	oil companies organization
CONDAM	Construction (Design and Management) Regulations
COP	Code of Practice
COP	coefficient of performance
COPA	Control of Pollution Act
COPEP	Chlorine Out-Plant Emergency Plan
COSHH	Control of Substances Hazardous to Health Regulations 1988
COTIF	Convention concerning International Carriage by Rail
COV	collision with other vehicle
CP	cathodic protection
CP	conceptual dependency
CPA	Canadian Petroleum Association
CPD	Committee for the Prevention of Disasters
CPL	Classification, Packaging and Labelling (Regulations) 1984

CPLR	Classification Packaging and Labelling of Dangerous Substances Regulations 1984
CPR	critical pressure ratio
CPS	control and protection system
CPS	critical path scheduling
CPSC	Consumer Product Safety Commission
CRHC	Chemical Reactor Hazard Centre
CRMR	complete and rigorous model-based reconciliation
CSE	concept safety evaluation
CSF	cancer slope factor
CSO	Central Statistical Office
CSR	concept safety review
CSTR	continuous stirred tank reactor
CTM	causal tree method
CTOD	crack tip opening displacement
CTU	cargo transport unit
CV	control valve
CVCP	Committee of Vice Chancellors and Principals
CVN	Charpy V-notch (test)
CW	continuous wave
CWA	dosed world assumption
CWR	Chemical Works Regulations 1922
CWRT	Center for Waste Reduction Technology
DAP	detergent alkylate plant
DAS	disturbance analysis system
DBMS	database management system
DCF	discounted cash flow
DCL	distributed control logic
DCS	digital control systems
DCS	Distributed Control Systems
DDB	dependency-directed backtracking
DDC	direct digital control
DDP	defect detection probability
DDT	deflagration to detonation transition
DEA	diethanolamine
DF	Damage Factor (Dow)
DF	dependent failure
DFA	2,4-difluoroaniline
DFNB	2,4-difluoronitrobenzene
DG	diesel generator
DGL	Directorate General of Labour
DHSV	down-hole safety valve
DIERS	Design Institute for Emergency Relief Systems
DIMP	Design Institute for Multiphase Processing
DIN	Deutsches Institut für Normung
DMAC	*N,N*-dimethylacetamide
DMV	diaphragm motor valve (Bhopal)
DO	damage only (accident)
DO	dissolved oxygen
DoE	Department of the Environment
DoEm	Department of Employment
DoEn	Department of Energy
DoI	Department of Industry
DoT	Department of Trade
DOT	Department of Transportation (USA)
DPLU	Disaster Prevention and Limitation Unit
DPT	decomposition pressure test
DPT	dynamically positioned tanker
DR	discounted premium rate
DRI	Distribution Ranking Index (Dow)
DRM	deterministic reference model
DSC	differential scanning calorimetry
DSHA	Dangerous Substances in Harbour Areas (Regulations) 1987
DSIR	Department of Scientific and Industrial Research
DSM	Dutch State Mines
DTA	differential thermal analysis
DTG	differential thermogravimetry
DTI	Department of Trade and Industry
DTIC	Defense Technical Information Center
DTL	dangerous toxic load
DTp	Department of Transport (UK)
DTT	de-energize-to-trip
E/E/PES	Electrical/Electronic/Programmable Electronic Systems
EC	error cause (Whalley)
EC	European Community
ECCS	emergency core cooling system
ECCS	European Convention for Constructional Steelwork
ECETOC	European Chemical Industry Ecology and Toxicology Centre
ECOIN	European Core Inventory of Existing Substances
ED	enumeration district
EDC	ethylene dichloride
EDF	Electricité de France
EDF	equivalent discrete failure
EDP	Emergency depressurization
EECS	Electrical Equipment Certification Service
EEGL	emergency exposure guidance level
EEI	Edison Electric Institute
EEI	emergency exposure index
EEL	emergency exposure limit
EEMUA	Engineering Equipment and Materials Users Association
EEPG	Emergency Exposure Planning Guidelines
EER	evacuation, escape and rescue
EEUA	Engineering Equipment Users Association
EF	error factor
EF	Escalation Factor (Dow)
EFS	emergency feedwater system
EFV	excess flow valve
EHS	effective stack height
EHS	extraordinarily hazardous substance
EIA	environmental impact assessment
EIDAS	Explosion Incidents Data Service
EINECS	European Inventory of Commercial Chemical Substances
EIS	environmental impact statement
EIV	emergency isolation valve
EJMA	Expansion Joint Manufacturers Association
ELD	engineering line diagram
ELSA	European laboratory for Structural Assessment
EM	error mechanism (Whalley)
EMAS	Employment Medical Advisory Service
EML	estimated maximum loss
EMS	Emergency Medical Services
EMS	environmental management system
EnvIDAs	Environmental Incidents Data Service
EO	equation oriented
EO	ethylene oxide
EOQ	economical order quantity
EP	environmental protection
EPA	Environmental Protection Act

EPA	Environmental Protection Agency
EPC	error producing condition
EPCRA	Emergence Planning & Community Right to Know Act 1986
EPRI	Electrical Power Research Institute
EPSC	European Process Safety Centre
EQO	environmental quality objective
EQS	environmental quality standard
ER	equivalent radiator
ER	Exposure Radius (Dow)
ERA	Electrical Research Association
ERC	Emergency Response Commission
ERCO	Energy Resources Company
ERDS	European Reliability Data System
ERG	emergency response guidelines
ERM	equilibrium rate model
ERPG	Emergency Response Planning Guidelines
ERQ	East Replacement Quarters (Piper Alpha)
ERS	emergency relief system
ERT	Environmental Research and Technology Inc.
ERV	expiratory reserve volume
ES	environmental statement
ES	explosion severity
ESA	European Space Agency
ESD	emergency shut-down
ESD,ESS	Emergency Shutdown System
ESH	electrical surface heating
ESP	equivalent standard plant
ESTC	Explosives Storage and Transport Committee
ESV	emergency shut-down valve
ESV	emergency shut-off valve
ET	error type (Whalley)
ETA	expected time of arrival
ETT	energize-to-trip
FA	fragility analysis
FAD	failure analysis diagram
FAD	failure assessment diagram
FAE	fuel–air explosion
FAFR	failure accident frequency rate
FAR	fatal accident rate
FB	fractional bias
FBL	fracture-before-leak
FCAW	fluxed core arc welding
FCT	flux-corrected transport
FDA	Food and Dreg Administration
FDG	flue gas desulphuriration
FDM	finite difference method
FDT	fractional dead time
FECA	Federal Emission Control Act 1974
FEMA	Federal Emergency Management Agency
FERC	Federal Energy Regulatory Commission
FET	Flammability, explosiveness and toxicity
FFFP	film forming fluoroprotein (foam)
FFP	flame front projection
F&EI	Fire and Explosion Index
F&G	fire and gas
FHA	Federal Highways Authority
FIA	Factory Insurance Association
FIBC	flexible intermediate bulk container
FICA	Federal Emission Control Act (Germany)
FL	frequency–loss
FM	Factory Mutual
FMA	Fertilizer Manufacturers Association
FMD	fragment mass distribution
FMEA	failure mode and effect analysis
FMEC	Factory Mutual Engineering Corporation
FMECA	failure modes, effects and criticality analysis
FMRC	Factory Mutual Research Corporation
FN	frequency–number (curve)
FOD	Field Operations Division
FoF	figure of friction
FoI	figure of insensitiveness
FOPL	first order predicate logic
FP	fluoroprotein
FPA	Fire Precautions Act 1971
FPA	Fire Protection Association
FPC	Federal Power Commission
FPS	floating production system
FPSO	floating production, storage and offloading (system)
FR	filling ratio
FRC	fast rescue craft
FRG	Federal Republic of Germany
FRP	fibre reinforced plastic
FRS	Fire Research Station
FRV	functional residual volume
FSA	formal safety assessment
FSM	fault–symptom matrix
FTA	fault tree analysis
FTE	fracture transition elastic (point)
FTP	fracture transition plastic (point)
FTS	fault tree synthesis
FWPCA	Federal Water Pollution Control Act 1972
GAO	General Accounting Office
GCM	Gas Conservation Module (Piper Alpha)
GD	Germeles–Drake
GDA	goal-directed activity
GdF	Gaz de France
GDO	general development order
GDR	German Democratic Republic
GFM	goodness-of-fit measure
GFRP	glass fibre reinforced plastic
GIS	general incident scenario
GMAW	gas-metal arc welding
GNP	Gross National Product
GOFA	goal-oriented failure analysis
GoI	Government of India
GOM	Gulf of Mexico
GP	general purging (nitrogen)
GPH	General Process Hazard (Dow)
GRP	glass reinforced plastic
GRS	Gesselschaft für Reaktorsicherheit
GRT	Gross registered tonnage
GS(I&U)R	Gas Safety (Installations and Use) Regulations 1984
GSR	Gas Safety Regulations 1972
GT	Gaz Transport
GTAW	gas-tungsten arc welding
GTST	goal tree–success tree
GVW	gross vehicle weight
HAC	hazardous area classification
HALO	hazard assessment of landfill
HANES	Health and Nutrition Examination Survey
HAZ	heat affected zone
HAZAN	hazard analysis
HAZMAT	hazardous material

HAZOP	hazard and operability (study)
HCFC	hydrochlorfluorocarbon
HCLPF	high confidence of low probability of failure
HCR	human cognitive reliability
HD	hazard distance
HD	Hazard Division
HDPE	high density polyethylene
HDR	high discharge rate
HEART	human error assessment and reduction technique
HED	Human Error Database
HEH	homogeneous equilibrium model
HEP	human error probability
HER	human error rate
HF	hydrogen fluoride
HFC	hydrofluorocarbon
HF/E	human factors/engineering
HFLR	Highly Flammable Liquids and Liquefied Petroleum Gases Regulations 1972
HFO	heavy fuel oil
HFRG	Human Factors in Reliability Group
HGDT	heavy gas dispersion trial
HGT	heavy goods train
HGV	heavy goods vehicle
HI	hazard index
HIO	Hazardous Incident Ordinance (Germany)
HIPS	high integrity protective system
HIS	Health Interview Survey
HISS	high integrity shutdown system
HIT	hazardous installations and transport
HITI	high integrity trip initiator
HITS	high integrity trip system
HIVE	high integrity voting equipment
HM	hazardous material
HMA	Human reliability assessment
HMAP	Hydrogen Fluoride Mitigation and Assessment Program
HMCIF	HM Chief Inspector of Factories
HMFI	HM Factory Inspectorate
HMIP	HM Inspectorate of Pollution
HMIR	Hazardous Materials Incident Reporting
HMV	hydraulic master valve
HND	Higher National Diploma
HORATIO	Human Response Analyzer and Timer for Infrequent Occurrences
HP	high pressure
HPI	high pressure injection
HPIM	high purity inert medium
HPIP	human performance investigation process
HQ	hazard quotient
HRA	human reliability analysis
HRC	hydrocarbon release (database)
HRS	hazard ranking scheme
HSB	Hartford Steam Boiler
HSC	Health and Safety Commission
HSE	Health and Safety Executive
HSF	hardware, software and fire fighting
HSWA	Health and Safety at Work etc. Act 1974
HTA	hierarchical task analysis
HTF	heat transfer fluid
HTF	high temperature fluid
HTGR	high temperature gas-cooled reactor
HTHM	high toxic hazard materials
HV	high velocity
IAEA	International Atomic Energy Agency

IAPH	International Association of Ports and Harbours
IARC	International Agency for Research on Cancer
IATA	International Air Transport Association
IBC	intermediate bulk container
IC	inspiratory capacity
ICAO	International Civil Aviation Organization
ICBO	International Conference of Building Officials
ICD	inherently cleaner design
ICE	Institution of Civil Engineers
ICFTU	International Confederation of Free Trade Unions
IChemE	Institution of Chemical Engineers
ICHMAP	International Co-operative Hydrogen fluoride Mitigation and Assessment Program
ICI	Imperial Chemical Industries
ICRP	International Committee on Radiological Protection
ICS	International Chamber of Shipping
ID	identification number
IDA	influence diagram analysis
IDLH	Immediately Dangerous to life and Health (limit)
IE	index of explosibility
IEC	International Electrotechnical Commission
IEE	Institution of Electrical Engineers
IET	insulated exotherm test
IFAL	instantaneous fractional annual loss
IFE	Institution of Fire Engineers
IGE	Institution of Gas Engineers
IHVE	Institution of Heating and Ventilation Engineers
IISO	Institution of Industrial Safety Officers
IL	integrity level
ILCI	International Loss Control Institute
ILO	International Labour Office
IMechE	Institution of Mechanical Engineers
IMAS	influence modelling and assessment system
IMCO	Intergovernmental Maritime Consultative Organization
IMDG	International Maritime Dangerous Goods (Code)
IMO	International Maritime Organization
INRS	Institute National de Recherche sur la Securité
IOI	International Oil Insurers
IP	industrial platform
IP	Institute of Petroleum
IPC	integrated pollution control
IPIECA	International Petroleum Industry Environment Conservation Association
IPL	independent layer of protection
IPSG	International Process Safety Group
IR	infrared
IRI	Industrial Risk Insurers
IRIS	incident reporting and investigation system
IRLG	Interagency Regulatory Liaison Group
IRV	inspiratory reserve volume
IS	ignition severity
ISA	Instrument Society of America
ISA	Instrumentation, Systems and Automation Society

ISGHO	International Study Group on Hydrocarbon Oxidation
ISGRA	International Study Group on Risk Assessment
ISI	Inherent Safety Index
ISLO	Installations Subject to Licensing Ordinance (Germany)
ISO	International Standards Organisation
ISR	incoming solar radiation
ISRS	International Safety Rating System
IST	isothermal storage test
ITB	Industry Training Board
ITB	Insurance Technical Bureau
ITC	Interagency Testing Committee
ITOPF	International Tanker Owners Pollution Federation
ITSA	Independent Tank Storage Association
IUR	International Union of Railways
JFRO	Joint Fire Research Organization
JHEP	joint human error probability
JIT	'just-in-time'
JRC	Joint Research Centre
JSA	Job safety analysis
JT	Joule–Thomson
JTMS	justification-based truth maintenance system
KAF	knowledge acquisition facility
KASP	Kjeller Ammonia Stress Corrosion Project
KWU	Kraftwerk Union
LA	Local authority
LAAPC	local authority air pollution control
LBB	leak-before-break
LBF	leak-before-fracture
LCn	lethal concentration (n% level)
LCC	life cycle costing
LCTn	lethal toxic concentration (n% level)
LCV	level control valve
LDn	lethal dose (n% level)
LDC	London Dumping Convention
LDG	List of Dangerous Goods and Conditions of Acceptance
LDPE	low density polyethylene
LEFM	linear elastic fracture mechanics
LEL	lower explosive limit
LEPC	Local Emergency Preparedness Committee
LER	licensee event report
LEV	local exhaust ventilation
LF	landfill
LFG	liquefied flammable gas
LFL	lower flammability limit
LGC	liquefied gas carrier
LGF	Liquefied Gaseous Fuels (Spill Effects Program)
LGFSTF	Liquefied Gaseous Fuels Spill Test Facility
LGV	light goods vehicle
LITTS	large inventory top tier site
LLNL	Lawrence Livermore National Laboratory
LN	logical necessity
LNG	liquefied natural gas
LNH3	liquefied ammonia
LOCA	loss of coolant accident
LOPA	Layer of protection analysis
LOV	locally operated valve
LOX	liquid oxygen
LPA	local planning authority
LPB	*Loss Prevention Bulletin*
LPG	liquefied petroleum gas
LPGA	liquefied Petroleum Gas Association
LPGITA	Liquefied Petroleum Gas Industry Technical Association
LPI	low pressure injection
LPR	linear polarization resistance
LQW	Living Quarters West (Piper Alpha)
LR	Lloyds Register
LRA	least replaceable assembly
LS	limit switch
LS	logical sufficiency
LTA	lost time accident
LTI	lost time injury
LTMS	logic-based truth maintenance system
LTPD	lot tolerance per cent defective
LTSR	long-term safety review
LVHV	low volume, high velocity
LWR	light water reactor
MAC	maximum allowable concentration
MACT	maximum achievable control technology
MAPP	major accident prevention plan
MAPP	methyl acetylene/propadiene/propylene
MAPCO	Mid-America Pipeline Company
MAPPS	maintenance personnel performance simulator
MARPOL	International Conference on Revision of the International Regulations for Preventing Collisions at Sea
MAUD	multi-attribute utility decomposition
MAWP	maximum allowable working pressure
MB	measure of belief
MC	motor cycle
MCA	Manufacturing Chemists Association
MCC	methylcarbamoyl chloride
MCL	maximum credible loss
MCSOII	multiple-cause, systems-oriented incident investigation
MCSP	Model Code of Safe Practice (IP)
MD	measure of disbelief
MDA	modellers data archive
MDF	multiple degree-of-freedom
MDI	4,4-Diphenylmethane diisocyanate
ME	multienergy (model)
MEA	monoethanolamine
MEHQ	methyl ether of hydroquinone
MEL	maximum exposure limit
MEPC	Marine Environment Protection Committee
MES	multilinear events sequencing
MESG	maximum experimental safe gap
MF	management factor
MF	material factor
MFCC	multiple forced circulation circuit
MGL	multiple Greek letter
MHAP	Major Hazards Assessment Panel
MHAU	Major Hazards Assessment Unit
MHIDAS	Major Hazard Incidents Data Service
MIBE	methyl-t-butyl ether
MIBK	methylisobutyl ketone
MIC	methyl isocyanate
MIC	minimum igniting current
MIE	minimum ignition energy
MIG	metal inert gas
MILNP	mixed integer non-linear programming
MILP	mixed integer linear programming

MITI	Ministry of International Trade and Industry
MLS	marine LNG system
MM	methyl methacrylate
MM	modified Mercalli
M&M	Marsh and McLennan
M&M	monitoring and maintenance
MMA	Methyl Methacrylate
MO	Marshall–Olkin
MOC	Management of change
MOC	method of characteristics
MoD	Ministry of Defence
MOL	main oil line
MOR	modification of risk
MORT	Management Oversight and Risk Tree
MOV	motor operated valve
MPA	mean presented area
MPD	minimum premarketing data
MPDO	maximum probable days outage
MPE	maximum permissible exposure
MPI	magnetic particle inspection
MPPD	Maximum Probable Property Damage
MPS	multiple point source
MPST	maximum permissible surface temperature
MRC	Medical Research Council
MRS	MIC refining still (Bhopal)
MRS	Midlands Research Station
MSA	Marine Safety Agency
MSC	Maritime Safety Committee
MSDS	material safety data sheet
MSS	MIC storage system (Bhopal)
MTTF	mean time to failure
MTBF	mean time between failures
MTTFF	mean time to first failure
MV	medium velocity
MV	munitions vehicle
MW	molecular weight
MWA	Mineral Workings Act 1971
N/A	not applicable
NAAQS	National Ambient Air Quality Standards
NACE	National Association of Corrosion Engineers
NADOR	Notification of Accidents and Dangerous Occurrences Regulations 1980
NAMAS	National Measurement Accreditation Scheme
NAS	National Academy of Sciences
NASA	National Aeronautical and Space Administration
NBFU	National Board of Fire Underwriters
NBS	National Bureau of Standards
NCB	National Coal Board
NCEC	National Chemical Emergency Centre
NCSR	National Centre for Systems Reliability
NCTR	National Center for Toxicological Research
NDE	Non-destructive evidence
NDE	non-destructive examination
NDRC	National Defense Research Committee
NDT	non-ductility transition
NDT	null ductility transition
NEA	Nuclear Energy Agency
NEIC	National Earthquake Information Center
NEL	National Engineering Laboratory
NEPA	National Environmental Policy Act
NESHAP	National Exposure Standards for Hazardous Air Pollutants
NFPA	National Fire Protection Association
NG	nitroglycerine
NGL	natural gas liquids
NIG	National Interest Group
NIHHS	Notification of Installations Handling Hazardous Substances Regulations 1982
NII	Nuclear Installations Inspectorate
NIOSH	National Institute of Occupational Safety and Health
NIST	National Institute of Standards and Technology
NML	Normal Maximum Loss
NMRS	near miss reporting system
NMS	Dangerous Substances (Notification and Marking of Sites) Regulations 1990
NMSE	normalized mean square error
NMMS	near miss management system
NMTMS	Non-monotonic truth maintenance system
NNS	Norwegian North Sea
NOAEL	no observable adverse effect level
NPD	Norwegian Petroleum Directorate
NPDES	National Pollutant Discharge Elimination System
NPL	National Physical Laboratory
NPP	nuclear power plant
NPS	Naval Postgraduate School
NPSH	net positive suction head
NPV	Net Present Value
NRA	National Rivers Authority
NRC	National Research Council
NRC	Nuclear Regulatory Commission
NRPB	National Radiological Protection Board
NRTS	National Reactor Test Station
NRV	non-return valve
NSAC	Nuclear Safety Analysis Center
NSC	National Safety Council
NSCA	National Society for Clean Air
NSPS	New Source Performance Standards
NSR	New Source Reviews
NSW	New South Wales
NTIS	National Technical Information Service
NTP	National Toxicology Program
NTS	Nevada Test Site
NTSB	National Transportation Safety Board
NWC	Naval Weapons Center
OAET	operator action event tree
OARU	Occupational Accident Research Unit
OAT	operator action tree
OB	oxygen balance
OBE	operating basis earthquake
OBO	ore/bulk/oil
OC	operating characteristic
OCIMF	Oil Companies International Marine Forum
OCM	on-condition maintenance
OD	oxygen demand
ODCB	*o*-dichlorobenzene
OECD	Organization for Economic Cooperation and Development
OEL	Occupational Exposure Limit
OES	Occupational Exposure Standard
OFG	over-the-top foam generation
OIA	Oil Industry Association
OIAC	Oil Industry Advisory Committee
OHSAS	Occupational Health and Safety Management systems
OII	Oil Industry Insurance

OILPOL	International Convention on the Prevention of Pollution of the Sea by Oil
OIM	offshore installation manager
ONAN	*o*-nitroaniline
ONCB	*o*-nitrochlorobenzene
OOA	observable operational attribute
OOP	object oriented programming
OOS	object oriented system
OPCS	Office of Population Census and Surveys
OPS	operating procedure synthesis
OPSO	Office of Pipeline Safety Operations
OREDA	Offshore Reliability Data (bank)
ORNL	Oak Ridge National Laboratory
ORR	overall risk rating
OSD	Offhore Safety Division
OSHA	Occupational Safety and Health Act 1970
OSHA	Occupational Safety and Health Administration
OS&RP	Office, Shops and Railway Premises (Act) 1963
OSTP	Office of Science and Technology Policy
OSW	Office of Solid Waste
OT	overturning
OTA	Office of Technology Assessment
OTS	Office of Toxic Substances
OV	Original Value (Dow)
P/A	peak-to-average
Paris MOU	Paris Memorandum
PASS	process and storage ship
PAW	Petroleum Administration for War
PAW	plasma arc welding
PB	pushbutton
PBB	polybrominated biphenyl
PBL	planetary boundary layer
PC	paired comparison
PCA	preliminary consequence analysis
P(C)A	Petroleum (Consolidation) Act
PCB	polychlorinated biphenyl
PCM	parametric correlation method
PCV	pressure control valve
PD	Property Damage
PDF	probability density function
PDS	potentiodynamic scan
PE	programmable electronic (hardware)
PEG	polyethylene glycol
PEEL	Public Emergency Exposure Limit
PEL	permissible exposure limit
PERT	project evaluation and review technique
PES	Programmable electronic system
PETN	pentaerythritol tetranitrate
PF	potential failure
PFC	perfluorocarbon
PFD	Probability of failure on demand
PFD	process flow diagram
PG	Pasquill–Gifford
PGA	peak ground acceleration
PGR	Road Traffic (Carriage of Dangerous Substances in Packages) Regulations
PH	precipitation hardening
PHA	preliminary hazard analysis
PHA	process hazard analysis
PHEA	predictive human error analysis
PHSA	Planning (Hazardous Substances) Act 1990
PI	personal injury (accident)
PI	pressure indicator
P&I(D)	piping and instrument (diagram)
PIF	performance influencing factor
PIIS	Prototype index of inherent safety
PIS	Protective instrumented Systems
PISC	Plate Inspection Steering Committee
PITB	Petroleum Industry Training Board
PIUS	process-inherent ultimate safety
PL	propositional logic
PLA	Port of London Authority
PLC	programmable logic control
P/M	peak-to-mean
PM	preventive maintenance
PML	Probable Maximum Loss
PMMA	polymethylmethacrylate
PMN	premanufacture notice
PMN	premarketing notification
PNEUROP	European Committee of Manufacturers of Compressors, Vacuum Pumps and Pneumatic Tools
POIC	planning, organization implementation and control
PORV	power-operated relief valve
PP	polypropylene
PPA	potential problem analysis
PPE	peak pressure enhancement
PPE	personal protective equipment
PRA	probabilistic risk assessment
PRP	potentially responsible person
PRV	pressure relief valve
PS	point source
PS	polystyrene
PSA	process safety management
PSA	pressure swing adsorption
PSA	probabilistic safety assessment
PSAT	Pre-start-up acceptance test
PSD	prevention of significant deterioration
PSDI	Project Software and Development Inc.
PSF	performance shaping factor
PSII	process safety incident investigation
PSM	process safety management
PSV	pressure safety valve
PT	passenger train
PTB	Physikalische Technische Bundesanstalt
PTFE	polytetrafluoroethene
PTSD	post-traumatic stress disorder
PTW	permit-to-work
PUF	polyurethane foam
PUHF	Process Unit Hazards Factor (Dow)
PV	pressure/vacuum
PVC	polyvinyl chloride
PVH	process vent header (Bhopal)
PVQAB	Pressure Vessel Quality Assurance Board
PVTC	Pressure Vessel Technical Committee
PVM	population vulnerability model
PWG	Provinciale Waterstaat Groeningen
PWHT	post-weld heat treatment
PWR	pressurized water reactor
QA	quality assurance
QHRDCS	quantitative human reliability data collection system
QUASA	quality assessment assurance of safety analysis
QC	quality control
QC	quality circle
QF	quality factor

QPT	qualitative process theory
QRA	quantitative risk assessment
RAG	risk appraisal group
RARDE	Royal Armament Research and Development Establishment
RAT	risk assessment tool
RBE	relative biological efficiency
RBV	remotely-operated block valve
RC	resistance–capacitance
RCAS	root cause analysis system
RCEP	Royal Commission on Environmental Pollution
RCM	reliability-centred maintenance
RCRA	Resource Conservation and Recovery Act 1976
RCS	reactor cooling system
RF	radio frequency
RF	Rossi–Forelli
RfD	reference dose
RH	relative humidity
R–H	Rankin–Hugoniot
RHI	Reaction Hazard Index
RIA	Robot Institute of America
RIC	Royal Institute of Chemistry
RID	International Regulations Concerning the Carriage of Dangerous Goods by Rail
RIDDOR	Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 1985
RII	relative incapacitation index
RLA	remanent life assessment
RME	reasonable maximum exposure
RMEE	relative mass extinguishing efficiency
RMP	risk management planning
RMPP	Risk Management and Prevention Program (California)
RoRo	roll-on/roll-off
RoSPA	Royal Society for the Prevention of Accidents
ROV	remotely-operated valve
RPE	respiratory protective equipment
RPI	Retail Price Index
RPT	rapid phase transition
RPV	reactor pressure vessel
RRL	Road Research Laboratory
RSPA	Research and Special Programs Administration
RSS	Reactor *Safety Study* (*Rasmussen Report*)
RSSG	Royal Society Study Group
RSST	Reactor Systems Screening Tool
RT	response type (Whalley)
RTJ	ring-type joint
RTR	Road Traffic (Carriage of Dangerous Substances in Road Tankers and Tank Containers) Regulations 1992
RV	Replacement Value (Dow)
RV	residual volume
RVVH	relief valve vent header (Bhopal)
SA	sneak analysis
SADT	self-accelerating decomposition temperature
SAI	Science Applications Inc.
SARA	Superfund Amendment and Reauthorization Act 1986
SARAH	systematic approach to the reliability assessment of humans
SAS	small area statistics
SAT	Site acceptance test
SAW	submerged arc welding
SBC	Standard Building Code
SCA	small-scale cook-off bomb
SCA	sneak circuit analysis
SCAT	systematic cause analysis technique
SCBA	self-contained breathing apparatus
SCC	stress corrosion cracking
SCCM	subjective cause–consequence model
SCI	Society of Chemical Industry
SCM	short-cut classical method
SCRA(M)	Short-cut risk assessment (method)
SCS	safety critical system
SCT	stress concentration theory
SDF	single degree of freedom
SEAOC	Structural Engineers Association of California
SEDEX	type of calorimeter
SEDF	standard equivalent discrete failure
SEER	Surveillance, Epidemiology and End Results Program
SEM	scanning electron microscopy
SEM	slip equilibrium model
SF	solid flame
SFG	signal flow graph
SGHWR	steam generating heavy water reactor
SGT	subgoal template
SHE	safety, health and environment
SHERB	Sandia Human Error Rate Bank
SHERPA	systematic human error reduction and prediction approach
SHH	substance hazardous to health
SI	safety interlock
SI	Statutory Instrument
SIC	Standard Industrial Classification
SIGTTO	Society of International Gas Tanker and Terminal Operators
SIKAREX	type of calorimeter
SIL	Safety integrity level
SIPRI	Stockholm International Peace Research Institute
SIRA	Scientific Instrument Research Association
SIS	Safety Instrumented System
SIS	safety interlock system
SIT	spontaneous ignition temperature
SITTS	small inventory top tier site
SKHCR	standardized skilled and hospitalized casualty rate
SKR	skills–rules–knowledge (model)
SL	Sandia National Laboratory
SL	support list
SLI(M)	success likelihood index (method)
SLOT	Specified Level of Toxicity
SLP	safety and loss prevention
SLT	superheat limit temperature
SM	sequential modulator
SMAW	shielded metal arc welding
SMR	Seismic margin earthquake
SMRB	Safety in Mines Research Board
SMRE	Safety in Mines Research Establishment
SMS	safety management system
SNG	synthetic natural gas
SOAP	spectrometric oil analysis programme
SOLAS	Safety of life at Sea
SOP	Standard Operating Procedure

SOT	Society of Toxicology
SPEAR	system for predictive error analysis and reduction
SPEGL	Short-term Public Emergency Guidance Level
SPH	Special Process Hazard (Dow)
SPI	Society of the Plastics Industry
SPM	shock pulse meter
SPS	Safety protection systems
SPS	submerged production station
SRD	Safety and Reliability Directorate
SRI	Stanford Research Institute
SRS	Systems Reliability Service
SRV	safety relief valve
SSD	Safety Shutdown System
SSE	safe shut-down earthquake
SSEB	South of Scotland Electricity Board
SSI	soil–structure interaction
SSIV	subsea isolation valve
SSMRP	Seismic Safety Margins Research Program
STAR	stability array (method)
STATAS	structured audit technique for the assessment of safety management systems
STCW	International Convention on Training, Certification and Watchkeeping for Seafarers
STEL	short-term exposure limit
STEP	sequentially timed events plotting procedure
STEP	sequentially timed events plot
STPL	short-term public exposure limit
SVA	single vehicle accident
SVO	collision of vehicle with stationary object
SWACER	shock-wave amplified coherent energy release
SWAN	stress wave analyser
TAFF	theoretical adiabatic flash fraction
TBC	p-t-butyl catechol
TBN	total base number
TCB	1,2,4,5-trichlorobenzene
TCDD	2,3,7,8-tetrachlorodibenzo-*p*-dioxin
TCP	2,4,5-trichlorophenol
TCPA	Town and Country Planning Act
TCPA	Toxic Catastrophe Prevention Act
TCSP	tank centre space potential
TDI	toluene diisocyanate
TEMA	Tubular Exchanger Manufacturers Association
TESEO	Tecnica Empirica Stima Errori Operatori
TFI	The Fertilizer Institute
TGZ	Technigaz
THERP	Technique for Human Error Rate Prediction
TIG	tungsten inert gas
TLC	total lung capacity
TLV	threshold limit value
TMI	Three Mile Island
TMR	triple modular redundant
TMS	truth maintenance system
TNO	Toegepast-Natuurwetenschappelijk Onderzoek
TNT	trinitrotoluene
TOA	technical options analysis
TOPS	Total Operations Processing System
TPA	third party activity
TPQ	threshold planning quantity
TQM	total quality management
TRA	total risk analysis
TRC	Thornton Research Centre
TRC	time–reliability correlation
TRI	toxic release inventory
TRRL	Transport and Road Research Laboratory
TS	turbulence scheme
TSCA	Toxic Substances Control Act
TSDF	treatment storage and disposal facility
TSR	temporary safe refuge
TT	task type (Whalley)
TUV	Technische berwachungs-Verein
TV	Tidal volume
TVA	Tennessee Valley Authority
TWA	time-weighted average
UAS	user-approved safety
UBC	Uniform Building Code
UCB	uncertainty bound
UCC	Union Carbide Corporation
UCIL	Union Carbide India Ltd
UCO	Use Classes Order
UCS	Union of Concerned Scientists
UEL	upper explosive limit
UFL	upper flammability limit
UF	uniform flux
UKAEA	UK Atomic Energy Authority
UKCIC	UK Chemical Information Centre
UKCP	UK Chlorine Producers
UKOOA	UK Oil Operators Association
UL	Underwriters Laboratories
UMC	underwater manifold centre
UN	United Nations
UNEP	UN Environment Programme
UNS	Unified Numbering System
UPS	Uninterrupted power supplies
UPS	uninterruptible power supply
UR(L)	United Refineries (Ltd)
USCG	US Coast Guard
USPHS	US Public Health Service
UST	underground storage tank
UV	ultraviolet
UVCE	unconfined vapour cloud explosion
VAE	Value of Area Exposed (Dow)
VC	vinyl chloride
VC	vital capacity
VCE	vapour cloud explosion
VCF	vapour cloud fire
VCM	vinyl chloride monomer
VDI	Verein Deutscher Ingenieure
VDU	visual display unit
VEEB	Vapour escape into, and explosion in, a building
VGS	vent gas scrubber (Bhopal)
VIM	vacuum induction melting
VKI	Von Karman Institute
VLCC	very large crude carrier
VM	Vulnerability model
VOC	volatile organic compound
VOD	vacuum–oxygen decarburization
VOD	velocity of detonation
VOF	velocity of fragment
VPM	value of production per month
VS	volumetric source
VSP	Vent Sizing Package
V&V	Verification and validation

WA	water authority
WAO	wet air oxidation
WATCH	Working Group on the Assessment of Toxic Chemicals
WE	Western Europe
WHO	World Health Organization
WI	Welding Institute
WOAD	World Offshore Accident Database
WSA	work safety analysis
WSL	Warren Spring Laboratory
WSSN	Worldwide Standard Seismographic Network
ZND	Zeldovitch–von Neumann–Döring
